Question 1:

Write a program that adds two integers **a & b** where,

a is the first integer input.

b is the second integer input

and save the value of sum in integer type variable **s.**

(Display s in new line)

- ·Sample Input

a = 2

b = 3

- ·Sample Output

s=5

- ·Explanation

The sum of the two integers **a** and **b** is computed as: **a + b.**
